Notes 4 Submission

How to install and remove software using the APT command.

- When installing and removing software, the sudo command must be used first, followed by the "apt" then "install" or "remove" depending on the desired command.
    - example 1: (install software)

```
sudo **apt** install bastet
```

    - example 2:(delete software)

```
sudo **apt** remove bastet
```

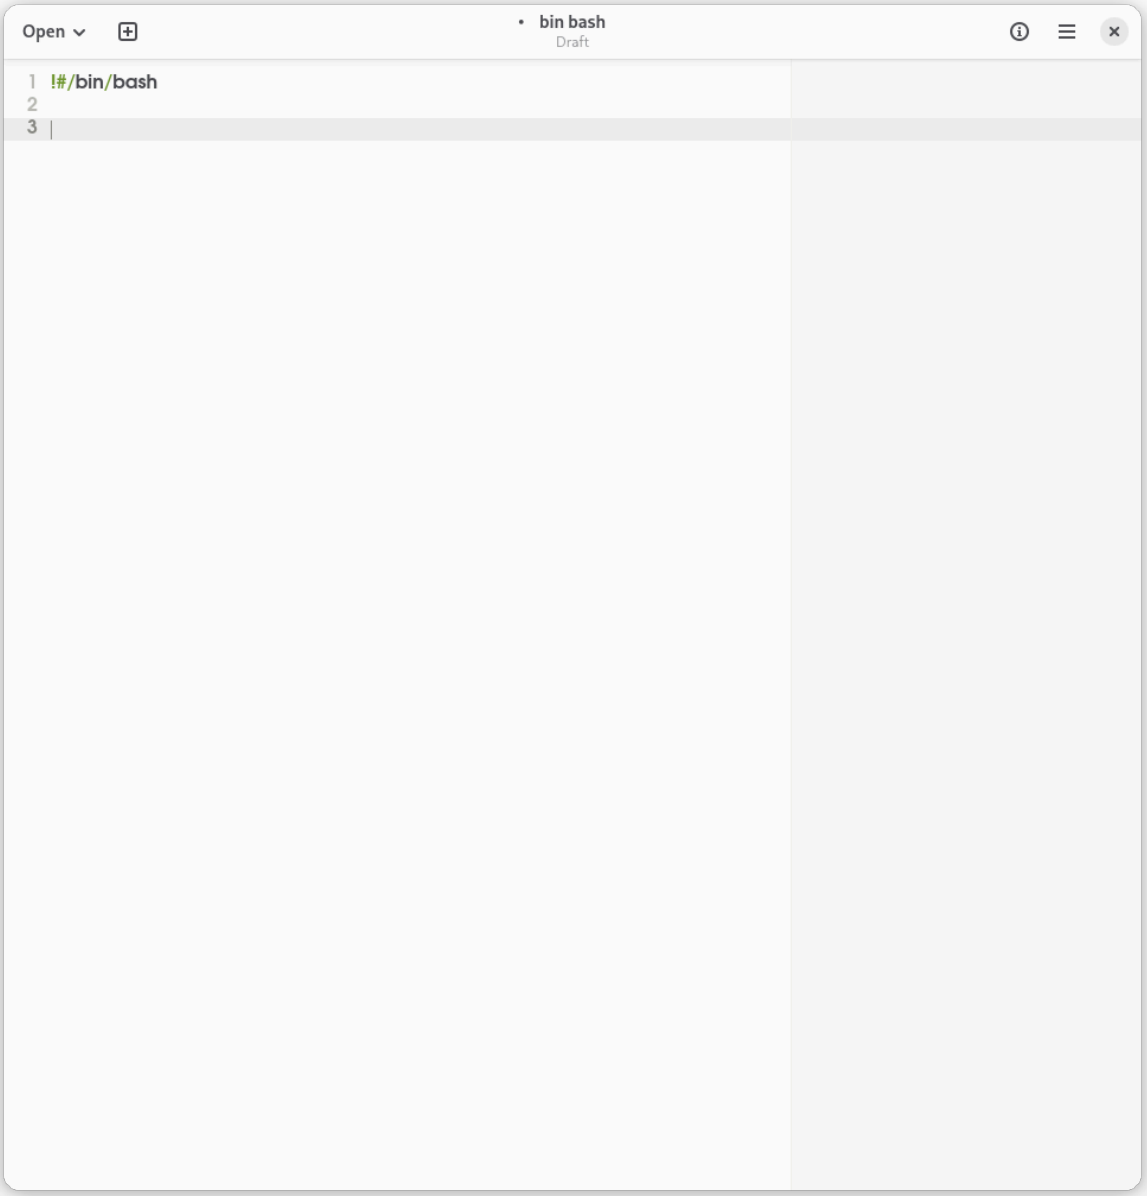

How to create a shell script step by step including screenshots and how to run it.

SHELL SCRIPTING

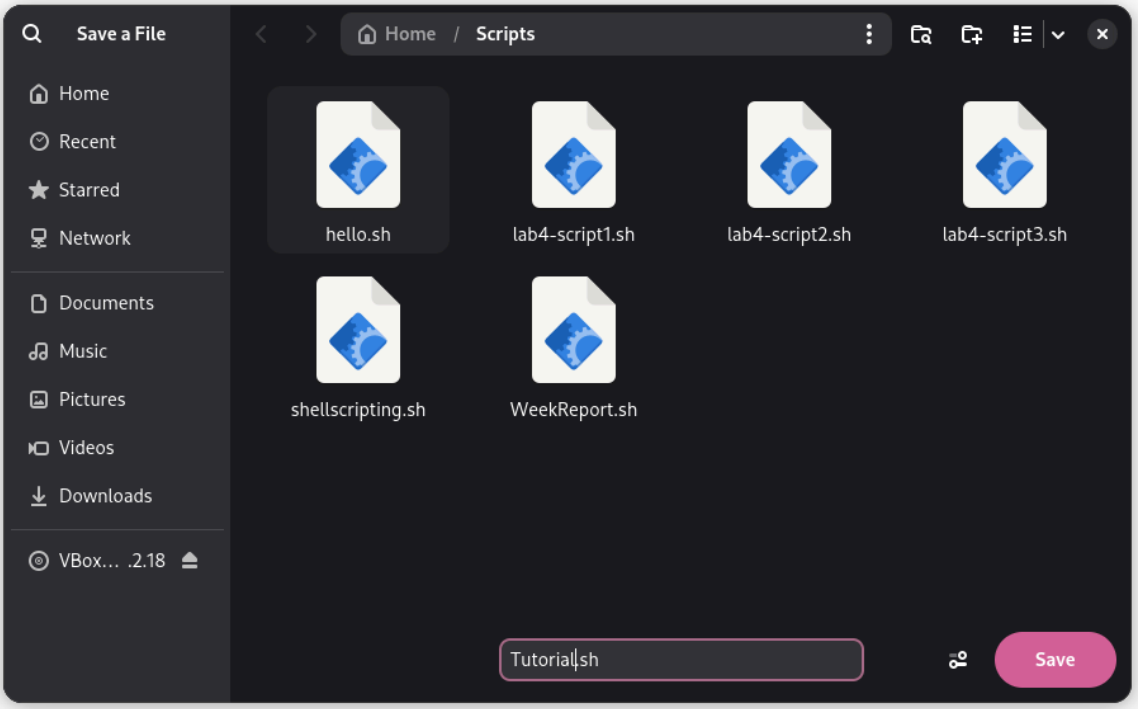

1. Open text editor
